

WELCOME TO EARTH

ALBERT LIN BIO Engineer

Albert Lin is a National Geographic Explorer and the host of shows such as “Lost Cities with Albert Lin,” “Lost Treasures of the Maya” and “Buried Secrets of the Bible with Albert Lin.” With a Ph.D. in materials science from the University of California, San Diego, Dr. Lin has turned several of his explorations into documentary series for National Geographic.

These shows often combine traditional archaeology, geology and historical research with cutting-edge LiDAR, sonar and computer imaging technology to bring a whole new perspective to past worlds. The application of these technologies, with help from experts in their fields, has also led to some startling new discoveries, especially in the world of Mayan archaeology. Dr. Lin’s first National Geographic exploration used non-invasive technology to search for the tomb of Genghis Khan and explore the Valley of the Khans in Mongolia.
