

BIOGRAPHY

Bruce Means

Biologist, National Geographic Explorer

Dr. Bruce Means is a biologist specializing in herpetology and a National Geographic Explorer. During his 50-year research career of studying reptiles and amphibians, he has published 235 scientific articles; been involved in numerous documentaries with Nat Geo, BBC and PBS; and has discovered 14 new species, seven genera, two families and multiple subfamilies and taxons. Means' passion is to prove that the hidden worlds of South America's tepuis are treasure troves of biodiversity that are worth saving.
